XANADOO LAUNCHES BUSINESS SOLUTIONS

(Wichita Falls, TX) – May 21, 2008 – Xanadoo, LLC announced the launch of Xanadoo Business Solutions, an innovative wireless broadband service for small and mid-size businesses. Xanadoo Business Solutions provides both wireless T1 and multi-tenant broadband solutions with superior performance, reliability and value.

“Xanadoo is excited to offer the business community a reliable, cost-effective wireless broadband alternative to traditional business-class DSL and cable,” said Mark Haley, General Manager. “Xanadoo Business Solutions is not only fast and reliable, but it’s also extremely cost effective. A traditional T1 service can cost up to \$7,500 a year or more. But with Xanadoo Business Solutions, you can get 3Mbps for as little as \$1,200 a year. That’s a savings of over \$6,000.”

Xanadoo uses 2.5Ghz Wi-MAX-based gear provided by Alvarion, the world’s leading provider of innovative wireless broadband network solutions. The Xanadoo wireless network also protects from service interruptions caused by outside construction work, utility digs or local teleco network issues that can impact traditional T1 and wireless services.

“Xanadoo has a strong local presence and is committed to providing the best in wireless broadband solutions,” said Haley. “And with local, dedicated account managers, Xanadoo is able to work one-on-one with businesses to provide customized, reliable and cost-effective broadband solutions.”

About Xanadoo:

Xanadoo is one of the fastest-growing wireless broadband operators in the U.S. Launched in early 2006, Xanadoo offers service in a number of Texas, Oklahoma and Illinois markets. Additionally, Xanadoo has licensed spectrum holdings in the 2.5MHz frequency bands covering over 8 million people across 9 states to support our continued growth and expansion. Visit www.xanadoo.com for additional details. Xanadoo’s network is powered by Cisco Systems, Inc.
